PROJECT INTRODUCTION

Company Overview:

Simple Threads is a boutique retail company specializing in selling curated clothing collections for both men and women. The company operates primarily through its online store and has built a growing customer base.

We were provided with the company's internal database, consisting of the following files:

- **Customer_Information.csv:** Contains demographic and basic information about each customer.
- **Product_Information.xlsx:** Contains details of all products sold by Simple Threads, including categories, prices, and other attributes.
- **Discount_Information.xlsx:** Contains records from an end-of-year promotional email campaign, listing customers who were offered discount coupons via email.
- **Purchase_Information.xlsx:** Captures all purchases made through the Simple Threads website during the first quarter of 2025 (January–March).

PROJECT INTRODUCTION

My role as a **Data Analyst** at Simple Threads was to help the management team to gain actionable insights about:

- Overall business performance
- Customer behavior
- Product sales trends
- The effectiveness of the discount email campaign

Student Details

Name: Aditya Jamdhade

Roll No.: B25BS1017

Institute: Indian Institute of Technology Jodhpur

Program: B.Sc/B.S in Applied AI & Data Science

Department: AIDE

Course Code: AIL 1040

Course Name: Basics of Data Analytics

CUSTOMER ANALYSIS

According to the customer analysis on the Purchase_Information.xlsx, there were a total of 22 unique customers who purchased in the 1st Quarter (January - March).

Customer Demographics

The following pivot table gives an overview of the customer distribution across different demographics.

Row Labels	Count of Address
Ahmedabad	4
Bangalore	7
Chennai	5
Delhi	4
Hyderabad	6
Jaipur	9
Kolkata	8
Mumbai	6
Pune	1
Surat	5

Pivot Table 1

Revenue Analysis

Total amount spent by the customers in Q1 was

Rs.22770/-

Average Spend per customer of Rs.1035/-

Row Labels	Sum of Amount
AB1234	1020.00
BA6789	900.00
CD5678	400.00
DC1234	765.00
EF5678	500.00
EF9012	900.00
GH3456	400.00
GH9012	1145.00
IJ3456	900.00
IJ7890	1280.00
KL2345	900.00
KL7890	1530.00
MN2345	900.00
MN6789	1080.00
OP1234	765.00
OP6789	1600.00
QR1234	1230.00
QR5678	1275.00
ST9012	720.00
UV3456	1500.00
WX7890	1530.00
YZ2345	1530.00
Grand Total	22770.00

Pivot Table 2

SALES ANALYSIS

Popular Products - Q1 2025

The most popular product in Q1 was **Skirt (Women)** - Green priced @ **Rs.900/-** , having total of 5 buys.

The next set of products were those having 2 buys each as given below:

Product ID	Category	Color	Amount
1001	shirt - red	Red	Rs.400/-
1002	shirt - blue	Blue	Rs.400/-
1007	t-shrit - black	Black	Rs.600/-
1009	t-shirt - blue	Blue	Rs.600/-
1010	trousers - black	Black	Rs.800/-
1011	trousers - white	White	Rs.800/-
1004	t-shirt - black (w)	Black	Rs.500/-
1005	t-shirt - black (w)	White	Rs.500/-
1006	t-shirt - black (w)	Yellow	Rs.500/-
1013	trousers - blue (w)	Blue	Rs.800/-
1019	skirt - white (w)	White	Rs.900/-
1020	skirt - red (w)	Red	Rs.900/-
1024	skirt - green (w)	Green	Rs.900/-

Total Revenue

Total revenue of Q1 2025 was **Rs.22770/-**

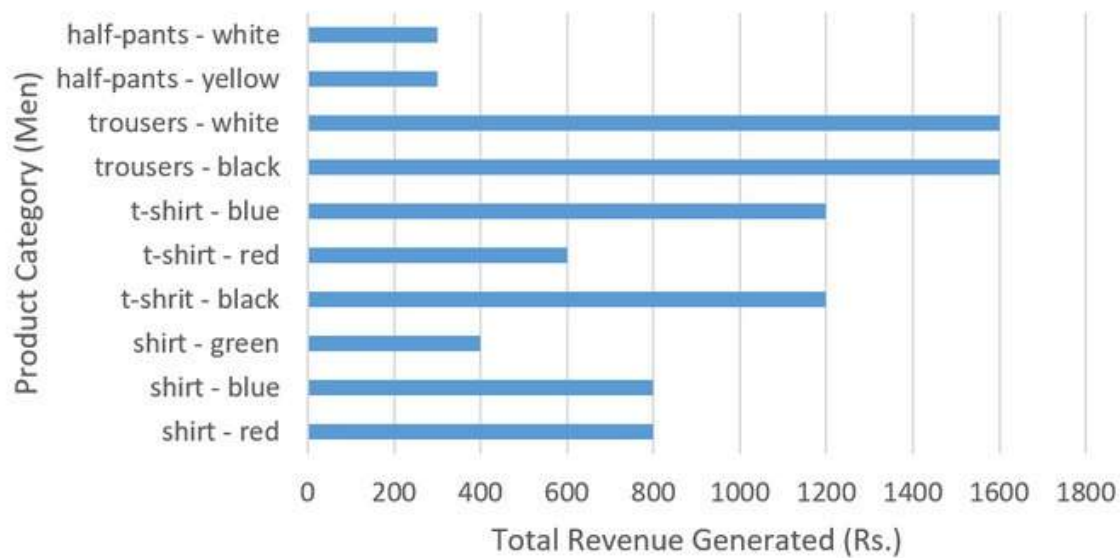

SALES ANALYSIS

Sales Trends

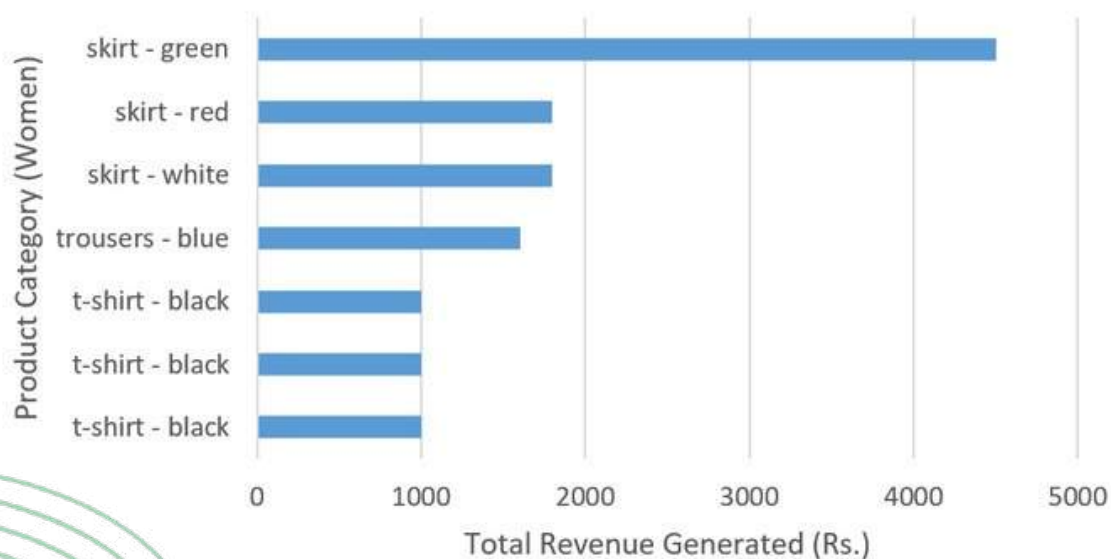

Male Category

Category to Sales Comparison

Female Category

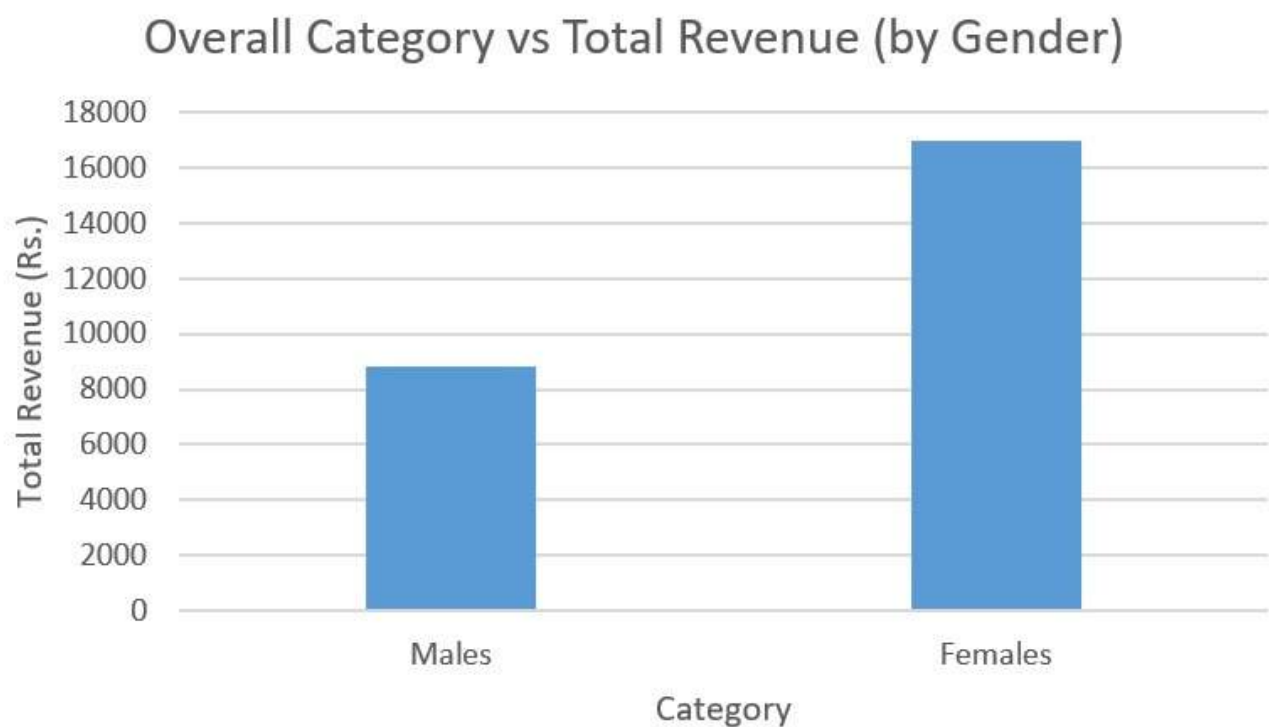

Category to Sales Comparison

SALES ANALYSIS

Sales Trends

Male Vs Female Category Comparison

This suggests that women category products are driving the sales more than the men category products. Marketing for the men category is required in order to balance the contribution of both the categories.

CAMPAIGN ANALYSIS

According to the analysis, discount coupons were sent to **36** customers. In total of **40** transactions from **22** customers, **7** did not use the coupons, while **15** of them used the coupons sent to them.

The average expenditure of those using coupons was **Rs.1104.67/-**, and of those not using was **Rs.885.71**. Thus, there has been a rise in the average spending of customers using the coupons.

Discount Analysis

According to the mode, people have majorly used coupons **2** times, except for the coupon **QAZWSX**, which was used for **3** times.

ADVANCE ANALYSIS

Box Plot Analysis

Product Prices

Minimum: 300 **Q1:** 400 **Q2:** 500 **Q3:** 800
Maximum: 900
Mean: 592 **Outliers:** No Outliers

Quantities Purchased

Minimum: 1
Maximum: 2
Mean: 1.6
Outliers: No Outliers

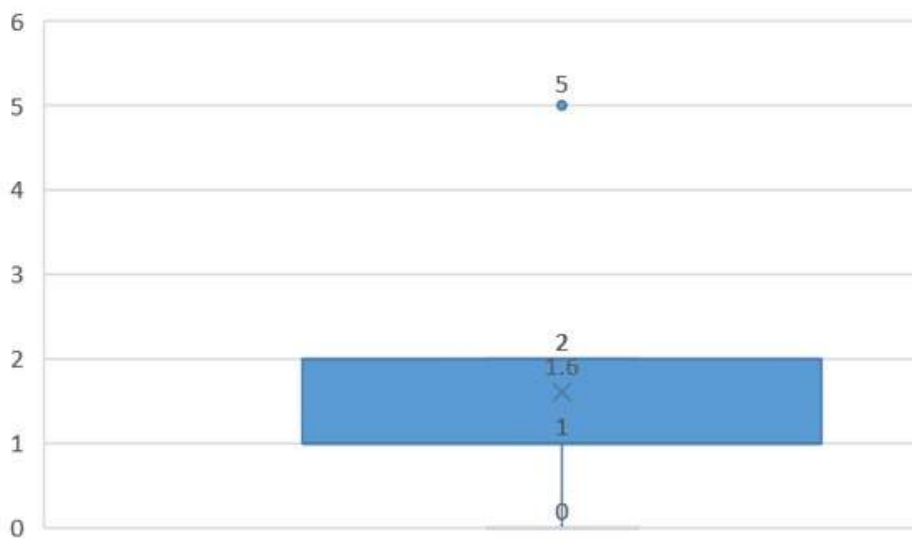

ADVANCE ANALYSIS

Box Plot Analysis

Quantities Purchased

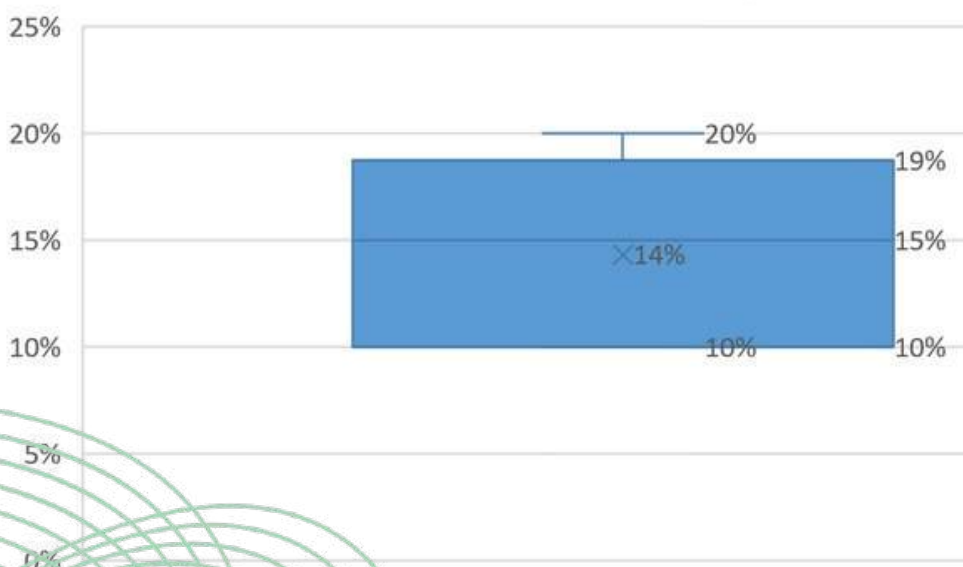

Quantity of Purchased Products (Female)

Minimum: 0
Q1: 1 **Q3:** 2
Maximum: 5
Mean: 1.6
Outliers: Yes (5)

Discount Percentages

Discount Percentage

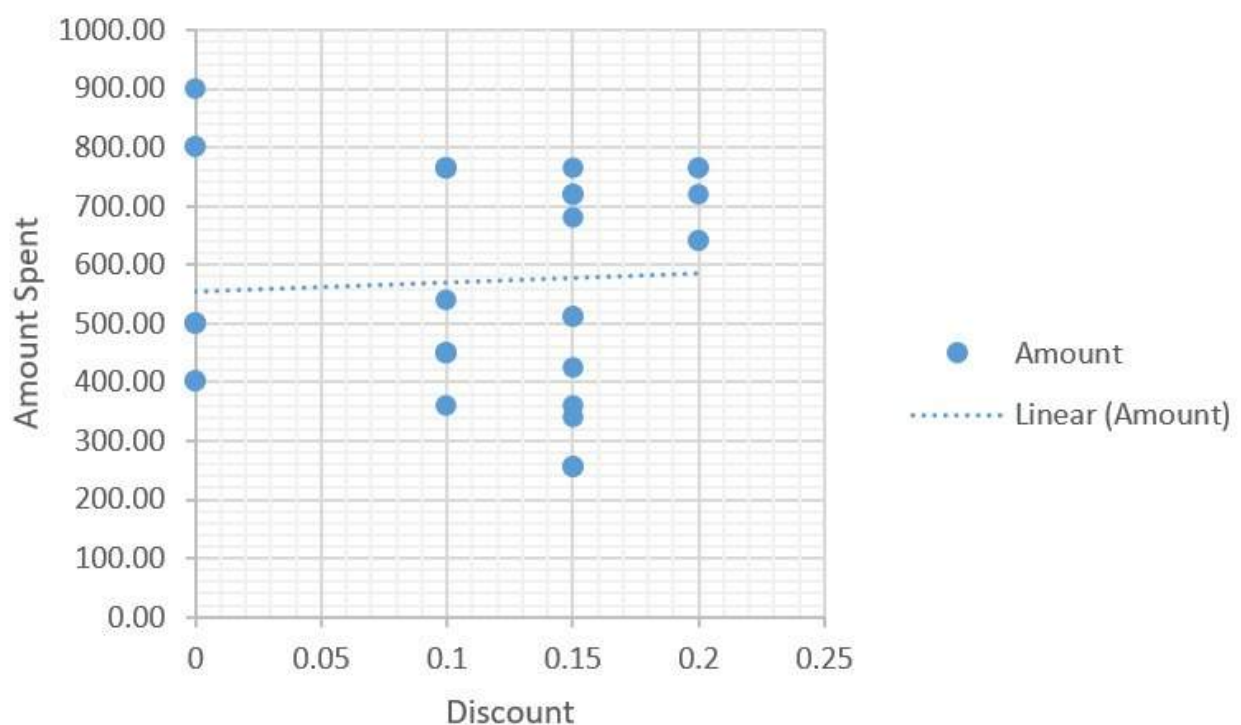

Minimum: 10%
Q1: 10%
Q2: 15%
Q3: 19%
Maximum: 20%
Mean: 14%
Outliers: No

ADVANCE ANALYSIS

Correlation Analysis

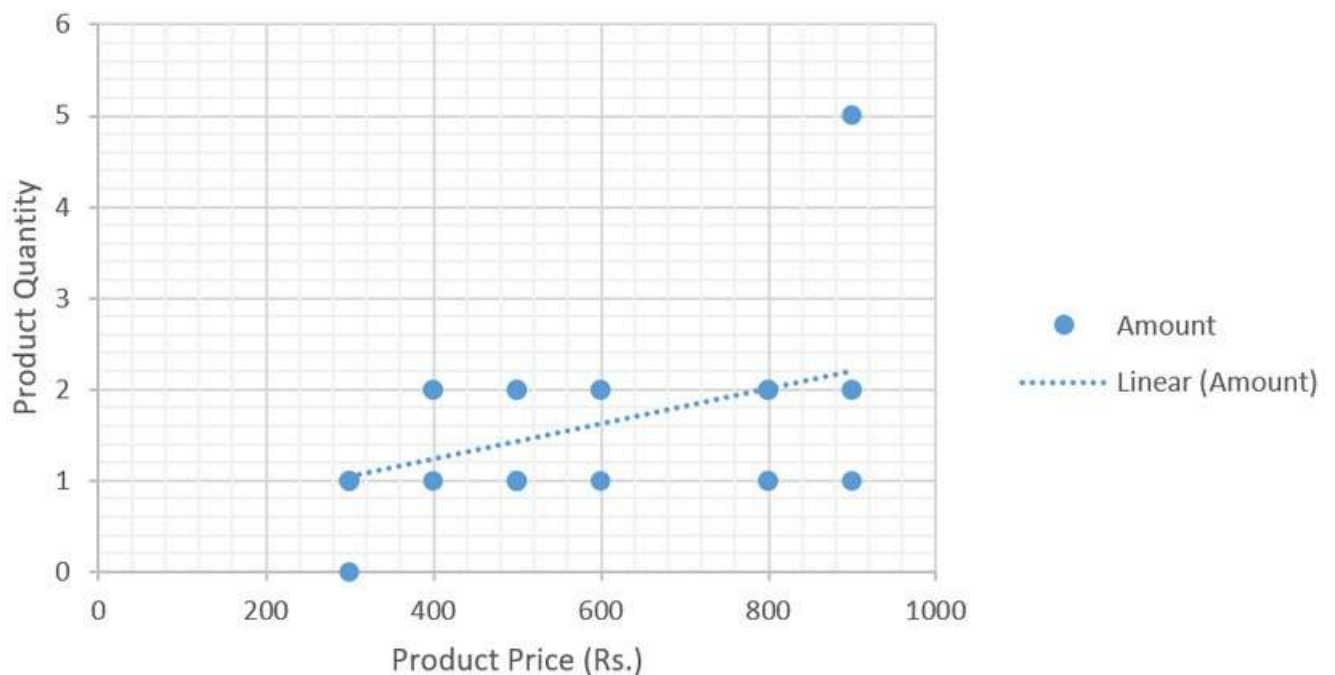

Offering a higher discount very weakly to does not correlate with higher purchase amounts. This is evident from the Pearson's Correlation Coefficient that is $r = 0.061$. This means discounts are not heavily driving sales, but it's the customer's trust on the quality of the product and the brand, that is fetching sales.

ADVANCE ANALYSIS

Correlation Analysis

There is a moderate positive correlation between quantity purchased and product price ($r=0.45$); higher-priced products tend to be bought in slightly larger quantities, but the relationship is not very strong. This is because the prices at the store are all on a higher range.

BUSINESS INSIGHTS

Customer Behavior

Key Findings

- **Active customers in Q1 2025:** 22 unique customers
- **Total transactions:** 40
- **Total revenue:** ₹22,770
- **Average spend per customer:** ₹1,035

Behavioral Insights

- Customers are low-frequency but high-intent buyers; few customers, but meaningful spending.
- The customer base is still small and concentrated, indicating an early-stage or niche business.
- Customers who received coupons showed higher average spending.

Customers trust the brand enough to spend over ₹1,000 on average, which is healthy for a boutique fashion business. The challenge is scaling the customer base, not extracting more value from the same users.

BUSINESS INSIGHTS

Product Sales

Key Findings

Aspect	Insight
Top product	Women's Green Skirt @ ₹900 (5 purchases)
Revenue driver	Women's category
Men vs Women	Women significantly outperform men
Price range	₹300 – ₹900
Quantity per order	Mostly 1–2 items

Sales Pattern Insights

- Women's apparel dominates revenue, clearly outperforming men's products.
- No extreme pricing issues, prices are well-distributed with no outliers.
- Customers are comfortable buying higher-priced items, sometimes in larger quantities.

Simple Threads is currently perceived as a stronger women's fashion brand. Men's products are not failing, but they are under-marketed or under-positioned.

BUSINESS INSIGHTS

Campaign Effectiveness

Key Findings

Metric	Coupon Users	Non-Users
Avg spend	₹1,104.67	₹885.71
Customers	15	7

- Coupons were sent to 36 customers
- 68% of buyers used coupons
- Most coupons were used twice, one coupon used three times
- Discount range: 10%-20%
- Correlation between discount % and purchase value: $r = 0.061$ (very weak)

Discounts increase average order value, but higher discounts do **NOT** drive higher spending. Customers are buying because they like the product and trust the brand, not because of aggressive discounting.

BUSINESS INSIGHTS

Advanced Insights

Correlation Insights

Relationship	Correlation (r)	Meaning
Discount vs Spend	0.061	Almost no impact
Price vs Quantity	0.45	Moderate positive

Interpretation

- Customers don't chase discounts.
- Higher-priced items are not scaring buyers away; it's simply a sign of premium acceptance.
- One outlier in purchase quantity (5 items) indicates potential loyal or bulk buyers.

ACADEMIC DECLARATION AND PROJECT CONTEXT STATEMENT

This report has been prepared as part of an academic capstone project and is intended solely for educational and assessment purposes.

The entity referred to as Simple Threads, along with all related datasets, customer information, products, campaigns, and business scenarios, is entirely fictitious and hypothetical. The data used in this report has been created or simulated exclusively for academic analysis. Any resemblance to real organizations, brands, individuals, or real-world situations is purely coincidental.

All analyses and insights presented are theoretical and illustrative, aimed at demonstrating the application of data analytics concepts, tools, and structured business reasoning within an academic context. The findings should not be interpreted as real-world business outcomes.

To enhance clarity, structure, and analytical quality, Artificial Intelligence (AI) tools were used where appropriate during the preparation of this report. AI assistance supported tasks such as data interpretation, insight articulation, and content refinement. While the outputs were carefully reviewed and contextualized, the use of AI tools may introduce certain interpretative limitations.
